| Produktbeschreibung      | A431 cells are a positive control for EGFR as they express high levels of EGFR. They also used for cell cycle studies and can be stimulated with EGF to stimulate EGFR and are therefore a very useful model to study EGFR downstream signalling cascades ... |
| Konzentration            | See vial for concentration                                                                                                                                                                                                                                    |
