Produktbeschreibung	The life cycle of a eukaryotic cell consists of various phases, two of which can morphologically and biochemically be identified. Firstly, during mitosis (M-phase), in which the cell divides into two identical daughter cells, chromosome condensation ...
Klonalität	Monoclonal
Klon-Bezeichnung	[8B3G]
Isotyp	IgM
Puffer	Each vial contains 100 ul 1 mg/ml purified monoclonal antibody in PBS containing 0.09% sodium azide. The product may contain some contaminating proteins next to the IgM as a result of ammonium sulphate precipitation being used for antibody purification.

Anwendungsbeschreibung	8B3G can be used for flow cytometric analyses and immunocytochemistry. 8B3G is not suitable for immunoblotting. Optimal antibody dilution should be determined by titration, recommended range is 1:50 - 1:100 for flow cytometry, and for immunocytochemistry with avidin-biotinylated Horseradish peroxidase complex (ABC) as detection reagent.
