| Puffer                   | Delipidated, heat inactivated, lyophilized, stable whole antiserum No preservative added. Total protein and IgG concentrations in the antiserum are comparable to those of pooled normal goat serum. No foreign proteins added. Reconstitute the lyophilized an |
| Quelle                   | C-reactive protein is an acute phase protein, synthesized in the liver. Its molecular weight is about 140,000. It occurs in serum of healthy men in low concentrations, <1.2 µg/ml. In cases of bacterial infection, surgical trauma and Hodgkins disease, h    |

| Formel                 | Delipidated, heat inactivated, lyophilized, stable whole antiserum No preservative added. Total protein and IgG concentrations in the antiserum are comparable to those of pooled normal goat serum. No foreign proteins added.                                                                                                                                                              |
| Anwendungsbeschreibung | Precipitation assays. Dilutions may be prepared by adding phosphate buffered saline (PBS, pH 7.2). Repeated thawing and freezing should be avoided. If a slight precipitation occurs upon storage, this should be removed by centrifugation. It will not affect the performance of the antiserum. Diluted antiserum should be stored at +4C, not refrozen, and preferably used the same day. |
