| Immunogen                | Human thyroid follicular cells                                                                                                                                                                                                                                 |
| Produktbeschreibung      | MAb 2H11 reacts with a partially defined epitope of human thyroglobulin. This epitope is different from the epitope recognized by MAb 6E1. Thyroglobulin is a 660kDa dimeric pre-protein with multiple glycosylation sites. It is produced by and processed... |
| Klonalität               | Monoclonal                                                                                                                                                                                                                                                     |
| Klon-Bezeichnung         | [2H11]                                                                                                                                                                                                                                                         |
| Molekulargewicht         | 660kDa (Dimeric Form)                                                                                                                                                                                                                                          |
| Isotyp                   | IgG1                                                                                                                                                                                                                                                           |

|                        |                                                                                                                                                                                                                                                               |
