Immunogen	A synthesized peptide derived from human KMT5A / SETD8 / Pr-SET7 Protein-lysine N-methyltransferase that monomethylates both histones and non-histone proteins. Specifically monomethylates Lys-20 of histone H4 (H4K20me1). H4K20me1 is enriched during mitosis and represents a specific tag for epigenetic transcriptional repression. Mainly functions in euchromatin regions, thereby playing a central role in the silencing of euchromatic genes.
