| Kategorie                | Antikörper                                                                                                                                                                                                                                                      |
| Produktbeschreibung      | Eukaryotic elongation factor 2 (eEF2) catalyzes the translocation of peptidyl-tRNA from the A site to the P site on the ribosome. eEF2 kinase (eEF2K) phosphorylates and inactivates eEF2, resulting in the inhibition of peptide-chain elongation. eEF2K ...   |
