| Kategorie                | Proteine/Peptide                                                                                                                                                                                                                                                                   |
| Produktbeschreibung      | Fibronectin type III domain-containing protein 5, the precursor of irisin, is a protein that is encoded by the FNDC5 gene.Human Irisin is synthesized as a 212 amino acid (aa) precursor encoding a type 1 transmembrane protein with a 121 aa extracellul...                      |
| Molekulargewicht         | 13.4 KDa                                                                                                                                                                                                                                                                           |
| NCBI                     | 8                                                                                                                                                                                                                                                                                  |
| Reinheit                 | Greater than 95% as determined by reducing SDS-PAGE                                                                                                                                                                                                                                |
| Anwendungsbeschreibung   | Always centrifuge tubes before opening.Do not mix by vortex or pipetting.It is not recommended to reconstitute to a concentration less than 100µg/ml.Dissolve the lyophilized protein in distilled water.Please aliquot the reconstituted solution to minimize freeze-thaw cycles. |
