| Kategorie                | Kits/Assays                                                                                                                                                                                                                                                    |
| Spezies Reaktivität      | Human                                                                                                                                                                                                                                                          |
| Produktbeschreibung      | The GENLISA Human SUMO-Activating Enzyme Subunit 1 (SAE1) ELISA includes features like: Ready to use protocol with break-apart wells for ease of use Standardisation and High Reproducibility Lot to Lot Consistency Accuracy and Precision Validated again... |
| Detektionsbereich        | 0.156 - 10 ng/ml                                                                                                                                                                                                                                               |
| Sensitivitaet            | 0.05 ng/ml                                                                                                                                                                                                                                                     |
| Proben                   | Serum, plasma, tissue homogenates, cell lysates, cell culture supernates and other biological fluids. For tear samples, please connect with us to discuss further.                                                                                             |
| Anwendungsbeschreibung   | Colorimetric, Absorbance measured at 450nm                                                                                                                                                                                                                     |
