| Formulierung           | 0.2 mg/ml in 1X PBS with 0.1 mg/ml BSA (US sourced) and 0.05% sodium azide                                                                                                                                                                                                                                                                                                                                                                          |
| Antibody Type          | Primary Antibody                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Application Verdünnung | Flow cytometry: 1-2ug/million cells,Immunofluorescence: 0.5-1ug/ml,Immunohistochemistry (FFPE): 1-2ug/ml for 30 min at RT,Western blot: 1-2ug/ml                                                                                                                                                                                                                                                                                                    |
| Anwendungsbeschreibung | <p>Optimal dilution of the recombinant Histone H1 antibody should be determined by the researcher.1. The prediluted format is supplied in a dropper bottle and is optimized for use in IHC. After epitope retrieval step (if required), drip mAb solution onto the tissue section and incubate at RT for 30 min.&lt;br /&gt;2. View the non-recombinant version of this &lt;a href=../tds/histone-antibody-1415-1-v2567&gt;Histone H1 antibody.</p> |
