Anwendungsbeschreibung	This Human Vascular endothelial cell growth factor (VEGF165) ELISA Kit employs a two-site sandwich ELISA to quantitate VEGF165 in samples. An antibody specific for VEGF165 has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any VEGF165 present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for VEGF165 is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of VEGF165 bound in the initial step. The color development is stopped and the intensity of the color is measured.
