Anwendungsbeschreibung	This Human E3 ubiquitin-protein ligase MYLIP (MYLIP) ELISA Kit employs a two-site sandwich ELISA to quantitate MYLIP in samples. An antibody specific for MYLIP has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and anyMYLIP present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for MYLIP is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of MYLIP bound in the initial step. The color development is stopped and the intensity of the color is measured.
