Anwendungsbeschreibung

This Human MIF4G domain-containing protein (MIF4GD) ELISA Kit employs a two-site sandwich ELISA to quantitate MIF4GD in samples. An antibody specific for MIF4GD has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any MIF4GD present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for MIF4GD is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of MIF4GD bound in the initial step. The color development is stopped and the intensity of the color is measured.
