Anwendungsbeschreibung	KIRA6 is an allosteric inhibitor of the endoplasmic reticulum protein IRE1alpha.¹ It inhibits IRE1alpha kinase activity ($IC_{50} = 0.60 \mu M$), XBP1 RNA cleavage, Ins2 RNA cleavage, and oligomerization. KIRA6 prevented cell death during ER stress/UPR in vivo. It reduced stress-induced inflammation caused by immunogenic cell death via targeting of HSP60.² KIRA6 abolished neuroinflammation and neuronal cell death caused by PAD4 overexpression in traumatic brain injury.³ It also was shown to block leukotriene biosynthesis in human phagocytes⁴ and inhibit mast cells⁵. KIRA6 blocked the induction of myeloid-derived suppressor cells and overcame resistance to anti-PD-1 therapy in 4T1 tumor cells.⁶
