| Produktbeschreibung      | DNA-dependent protein kinase (DNA-PK) is an important factor in the repair of double-stranded breaks in DNA. Cells lacking DNA-PK or in which DNA-PK is inhibited fail to show proper nonhomologous end-joining (NHEJ). DNA-PK is composed of two DNA-bind... |
| Klonalität               | Monoclonal                                                                                                                                                                                                                                                    |
