| Produktbeschreibung      | Fatty acid desaturases (FADS) are enzymes that convert a single bond between two carbon atoms (C-C) to a double bond (C=C) in a fatty acyl chain. The resultant double bond is often referred to as an unsaturated bond, and the reactions catalyzed by th... |
| UniProt                  | <a href="#">Q96I39</a>                                                                                                                                                                                                                                        |
| Reinheit                 | Purified.                                                                                                                                                                                                                                                     |
| Formulierung             | Supplied as a lyophilized powder from PBS, 0.05% sodium azide.                                                                                                                                                                                                |
