| Kategorie                | Molekularbiologie                                                                                                                                                                                                                                             |
| Produktbeschreibung      | Ribonucleic acids are long-chain polymers of nucleotides linked through 3,5-phosphodiester bonds. Constituent bases are derivatives of purine and pyrimidines, the sugar is D-ribose. The RNA nucleotide sequence, which is genetic information transferre... |
| Molekulargewicht         | 1200                                                                                                                                                                                                                                                          |
| Formulierung             | Supplied as a liquid in 10mM Tris-HCl, pH 7.5, 1mM EDTA.                                                                                                                                                                                                      |
