| Applikation              | FA                                                                                                                                                                                                                                                            |
| Produktbeschreibung      | The NF-kB Luciferase Reporter cell line is a stably transfected Jurkat T cell line which expresses Renilla luciferase reporter gene under the transcriptional control of the NF-kB response element. NF-kB is a key transcription factor that is involved ... |
| Puffer                   | Each vial contains $2 \sim 3 \times 10^6$ cells in 1 ml of 90% FBS + 10% DMSO.                                                                                                                                                                                |
| Application Verdünnung   | <h2>Application:</h2>Monitor the NF-kB signaling pathway activity.Screen for activators or inhibitors of the NF-kB signaling pathway. <h2>Culture conditions:</h2> Cells should be grown at 37C with 5% CO2 using RPMI medium supplemen                       |
