| Spezies Reaktivität      | Human                                                                                                                                                                                                                                                         |
| Immunogen                | Peptide sequence around phosphorylation site of serine 303 (P-P-S(p)-P-P) derived from Human HSF1.                                                                                                                                                            |
| Produktbeschreibung      | DNA-binding protein that specifically binds heat shock promoter elements (HSE) and activates transcription. In higher eukaryotes, HSF is unable to bind to the HSE unless the cells are heat shocked. Parvaneh Rafiee, et,al. (2006) Am J Physiol Cell Phy... |
