| Spezies Reaktivität      | Human                                                                                                                                                                                                                                                         |
| Immunogen                | Peptide sequence around aa.295~299(L-H-K-D-E)derived from Human CDK4.                                                                                                                                                                                         |
| Produktbeschreibung      | Cyclin-dependent kinase activity is regulated by T-loop phosphorylation (Thr172 in the case of CDK4), by the abundance of their cyclin partners, and by association with CDK inhibitors of the Cip/Kip or INK family of proteins . The inactive ternary co... |
