| Product Description        | The clone OKM1, a mouse monoclonal antibody, binds with a 165 kDa adhesion glycoprotein present in human cells known as CD11b that associates with the 95 kDa integrin beta2 (CD18) to form the CD11b/CD18 complex, also known as Mac-1 or CR3. CD11b is e... |
| Clonality                  | Monoclonal                                                                                                                                                                                                                                                    |
| Clone Designation          | [OKM1]                                                                                                                                                                                                                                                        |
| Isotype                    | IgG2b,k                                                                                                                                                                                                                                                       |
| NCBI                       | <a href="#">3684</a>                                                                                                                                                                                                                                          |
