Source	NKI (SPV)-L1 is a mouse monoclonal IgG1 antibody derived by fusion of Sp2/0 mouse myeloma cells with splenocytes from a BALB/c mouse immunized with cytotoxic T-cell clone HG-38.
Formula	Each vial contains 100µl 1mg/ml purified monoclonal antibody in phosphate buffered saline (PBS) containing 0.09% sodium azide.
Application Notes	The NKI (SPV)-L1 antibody is suitable for the detection of CD11a by immunoprecipitation, immunocytochemistry, immunohistochemistry on frozen sections and by flow cytometry. Human tonsil is suitable for use as a positive control tissue. Optimal antibody dilutions for the different applications should be determined by titration.
