Application Notes

WesternBlot: To detect hNT-4 by Western Blot analysis this antibody can be used at a concentration of 0.1-0.2 µg/ml. Used in conjunction with compatible secondary reagents the detection limit for recombinant hNT-4 is 1.5-3.0 ng/lane, under either reducing or non-reducing conditions.. Sandwich: To detect hNT-4 by sandwich ELISA (using 100 µl/well antibody solution) a concentration of 0.5 - 2.0 µg/ml of this antibody is required. This antigen affinity purified antibody, in conjunction with BioGems Biotinylated Anti-Human NT-4 (60-253BT) as a detection antibody, allows the detection of at least 0.2 - 0.4 ng/well of recombinant hNT-4.. Neutralization: To yield one-half maximal inhibition [ND50] of the biological activity of hNT-4 (50.00 ng/ml), a concentration of 2.0-4.0 µg/ml of this antibody is required.. Reconstitution: Centrifuge vial prior to opening. Reconstitute in sterile water to a concentration of 0.1-1.0 mg/ml.
