| Conjugation                | Biotin                                                                                                                                                                                                                                                         |
| Product Description        | IgE (non-immune) (human), (biotin conjugate)...                                                                                                                                                                                                                |
| Source                     | Purified human IgE with kappa light chains produced in vitro from a monoclonal hybridoma.                                                                                                                                                                      |
| Purity                     | Protein L purified. The original antibody-producing B cells were obtained from a healthy donor tested negative by US-FDA approved tests against HIV, HCV and Hepatitis B. Although the antibody comprising BPD-DIA-HE1B is purified from a monoclonal hybridom |
| Form                       | Liquid. In 0.01M phosphate buffer, pH 7.4, containing 0.14M sodium chloride and 15mM sodium azide.                                                                                                                                                             |
| Application Notes          | Can be used as standard in IgE quantifying assays. Functional Application: cell stimulation.                                                                                                                                                                   |
