| Category                   | Molekularbiologie                                                                                                                                                                                                                                             |
| Conjugation                | Unconjugated                                                                                                                                                                                                                                                  |
| Product Description        | DNA was prepared from cell line WM1985. WM1985 is a human melanoma cell line that displays flat cell morphology and forms tight colonies in culture medium. This cell line features the specific V600E (Val600Glu) mutation at codon 600 in the BRAF gene.... |
| Concentration              | 200 ng / µl (by UV absorbance at 260 nm)                                                                                                                                                                                                                      |
| Buffer                     | 0.01 M Tris Chloride, 0.001 M EDTA, pH 7.6                                                                                                                                                                                                                    |
| Source                     | Human                                                                                                                                                                                                                                                         |
| Form                       | Liquid                                                                                                                                                                                                                                                        |
| Application Notes          | Purified Genomic DNA is suitable for a number of molecular biology applications including but not limited to preparation of genomic libraries, PCR templates, DNA sequencing, DNA fingerprinting, and mutation analysis.                                      |
