| Species Reactivity         | Human                                                                                                                                                                                                                                                                              |
| Product Description        | V-set and immunoglobulin domain-containing protein 4(VSIG4) is a transmembrane protein contains a signal peptide, a V-type Ig-like domain, a C2-type Ig-like domain, several potential O-glycosylation sites, and an intracellular domain with 2 potential...                      |
| Molecular Weight           | 56.3 KDa                                                                                                                                                                                                                                                                           |
| NCBI                       | <a href="#">9</a>                                                                                                                                                                                                                                                                  |
| Purity                     | Greater than 95% as determined by reducing SDS-PAGE                                                                                                                                                                                                                                |
| Application Notes          | Always centrifuge tubes before opening.Do not mix by vortex or pipetting.It is not recommended to reconstitute to a concentration less than 100µg/ml.Dissolve the lyophilized protein in distilled water.Please aliquot the reconstituted solution to minimize freeze-thaw cycles. |
