| Category                   | Kits/Assays                                                                                                                                                                                                                                                    |
| Species Reactivity         | Human                                                                                                                                                                                                                                                          |
| Product Description        | The GENLISA Human Zinc Finger X-Chromosomal Protein (ZFX) ELISA includes features like: Ready to use protocol with break-apart wells for ease of use Standardisation and High Reproducibility Lot to Lot Consistency Accuracy and Precision Validated again... |
| Range                      | 78.125 - 5000 pg/ml                                                                                                                                                                                                                                            |
| Sensitivity                | 46.875 pg/ml                                                                                                                                                                                                                                                   |
| Samples                    | Serum, plasma, tissue homogenates, cell lysates, cell culture supernates and other biological fluids. For tear samples, please connect with us to discuss further.                                                                                             |
| Application Notes          | Colorimetric, Absorbance measured at 450nm                                                                                                                                                                                                                     |
