| Product Description        | Immunoglobulin G2 (IgG2) is a member of many immunoglobulin G developed and secreted by effective B cells. In wake of cutting by pepsin, IgG is divided into two F(ab)s with one antigen binding site and a high conserved Fc segment. The Fc segment bear... |
| Molecular Weight           | 27.3 kDa                                                                                                                                                                                                                                                      |
| Tag                        | Native                                                                                                                                                                                                                                                        |
