Target	DLL1
Application Notes	ActiveMax Human DLL1 µBeads, premium grade (for cells, 20 µm) activate Notch signaling in hematopoietic stem/progenitor cells (HSPCs) through DLL1 ligand-receptor engagement. It mimics DLL1+ thymic epithelial cells by presenting membrane-bound DLL1 ectodomains, driving T-lineage commitment via Notch-mediated transcriptional activation. It enables in vitro T cell differentiation from iPSC-derived sources, including the progression: CD34+ HSPCs progenitor T cells functional TCRalpha+ T cells. With standardized biochemical properties ensuring batch consistency, it provides both a research model for T cell development and a scalable platform for producing engineered T cell therapies from renewable stem cell sources.
