Application Notes	This Human Matrix metalloproteinase-26 (MMP26) ELISA Kit employs a two-site sandwich ELISA to quantitate MMP26 in samples. An antibody specific for MMP26 has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any MMP26 present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for MMP26 is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of MMP26 bound in the initial step. The color development is stopped and the intensity of the color is measured.
