Application Notes	A novel DHP L-type Ca ²⁺ channel blocker that also inhibits Syk. ¹ Blocks Abeta production, APPbeta secretion and reduces BACE-1 expression in CHO cells over-expressing Abeta in vitro. Enhances clearance of Abeta across the blood brain barrier in vivo. Reduces brain Abeta levels in a mouse tauopathy model. ¹ Clinically useful antihypertensive agent. ² Has been shown to prevent cognitive decline in some clinical trials. ³ Produces a protective effect on glutamate neurotoxicity in retinal ganglion cells, an effect not shared by other L-type Ca ²⁺ channel blockers such as nifedipine and diltiazem. ⁴
