| Category                   | Kits/Assays                                                                                                                                                                                                                                                   |
| Product Description        | Superoxide Dismutases (SOD) (WST-8 method) is widely used as a readout in redox biology to assess oxidative stress, antioxidant capacity, and the impact of ROS/RNS on cellular damage and signaling. This microplate-based assay kit supports quantitativ... |
| Samples                    | Serum, Plasma, Cell Culture Supernatant and other biological samples.                                                                                                                                                                                         |
