| Category                   | Molekularbiologie                                                                                                                                                                                                                                             |
| Product Description        | PECI, also referred to as DRS1, ACBD2 or HCA88, is a protein that localizes to the peroxisomal matrix and contains one ACB (acyl-CoA-binding) domain. This protein is expressed abundantly in liver, heart and skeletal muscle. It functions to catalyze t... |
| Molecular Weight           | 42.3                                                                                                                                                                                                                                                          |
| NCBI                       | <a href="#">006108</a>                                                                                                                                                                                                                                        |
| Purity                     | ~95% (SDS-PAGE).                                                                                                                                                                                                                                              |
| Form                       | Supplied as a liquid in 20mM Tris-HCl, pH 8.0, 10% glycerol.                                                                                                                                                                                                  |
