| Immunogen                  | Recombinant full-length human n-Myc protein.                                                                                                                                                                                                                  |
| Product Description        | The v-Myc oncogene, initially identified in the MC29 avian retrovirus, causes myelocytomas, carcinomas, sarcomas and lymphomas, and belongs to a family of oncogenes conserved throughout evolution. In humans, the family consists of five genes: c-Myc, ... |
| Clonality                  | Monoclonal                                                                                                                                                                                                                                                    |
| Clone Designation          | [NMYC-1]                                                                                                                                                                                                                                                      |
