| Product Description        | The clone M-2E6, a mouse monoclonal antibody selectively recognizes the epitope present in the Fab arms (anti- Fd $\mu$ ) of the surface monomeric IgM molecule on B cells. It reduces the growth of the neoplastic B cells through its intrinsic crosslinking p... |
| Clonality                  | Monoclonal                                                                                                                                                                                                                                                          |
| Clone Designation          | [M-2E6]                                                                                                                                                                                                                                                             |
| Isotype                    | IgG1, k                                                                                                                                                                                                                                                             |
